

Liquid Analysis for Metals Extraction and Processing Brochure

This new application guide from Emerson Process Management includes advanced liquid measurement technologies. The guide outlines liquid analytical solutions for leaching and ore extraction, concentration and separation, finished product purification and waste disposal as well as approaches to network management for metals processing plants. If you'll pardon the pun, it's a gold mine of information.

To learn more, contact Emerson Process Management at 1-800-854-8257, or email emerson@emerson.com.

Measure Color...Measure Quality

The UltraScan VIS spectrophotometer measures both reflected and transmitted color, and meets CIE and ASTM guidelines. As recommended by the CIE, spectral data is measured, and tristimulus color calculations are performed, from 360 to 780nm. Its light source is controlled in the ultraviolet region for the accurate measurement of whitening agents.
