## Experiments

### The National Chemistry Week (NCW)

Executive Director of the American

Chemical Society gathered a scripted program that could

be presented at any time on

any day of the week. This idea has expanded to become the centerpiece

of the Cleveland Section's NCW activities. On numerous occasions it has received national

recognition from the American Chemical Society, including several ChemLuminary Awards the

past several years. The Cleveland Section's volunteers will perform at least 10

demonstrations at 12 schools and other public sites involving up to 100 students.

NCW efforts reach many students each year because of various sponsors who have donated

time, materials and

space.

be presented at any time on
