SUMMARY REPORT

TEACHING OF UNDERGRADUATE PROCESS DYNAMICS AND CONTROL

A mini-session presented at the Annual Meeting

American Institute of Chemical Engineers

Los Angeles, California

November 20, 1975

Committee Members

Dr. Edwin O. Eisen, Chairman

Gulf Oil Corporation

University of Virginia

Dr. Angelo J. Perna

M T Tustitute of Technology.

INTRODUCTION

	The appended questionnaire was sent in May, 1975 to the Chairman of each

	<u>-</u>
	need for practical applications of process control was also frequently cited.
	About 1/3 of the courses use classroom demonstrations and audio-visual
	aids to reinforce class lectures. Three-fourths of the courses rely on
	laboratory work to complement classroom lectures.
	LABORATORY CONTENT
	The table below lists the percentage of universities offering no labora-
	tory work in the designated area, and the average number of hours per semes-

OBJECTIVES

a. Controls. b. Mathematical modeling.

c. Frequency response techniques.

d. Stability. e. Control design.

Course Policy Fall 1973

Instead of the usual dog and pony show -- lectures and exams -- we are going to use a mastery oriented instruction method for CM416. The method has been used at MIT, Michigan State, University of North Carolina, Bucknell, Harvard, and more than 100 other places. Most students having taken a course by this method choose to take other courses by the same method rather than by the lecture method. They say they

	work of the tutors and be the final judge when there is a disagreement about the
	results of a quiz. He will always be available to help you learn by discussing the
	t.

Table 1. Grading Scheme Details

Passing a study unit - 10 points; maximum possible + 120 Exam Score maximum possible + 12 Penalty points for passing a study unit more than one week late -- subtract 1 point per unit; maximum possible - 12 Assisting as a tutor - 2 points/week; maximum possible + 14 Grading Scale ≥ 200 ← A student getting this score will receive a certificate

	A final examination will be given during the final examination period in
A	
	November. This examination will cover a sampling of all of the objectives stated
	for the course. Every student must take the final examination. For those students

examination scores for computing the final course grade.

Hours

List of Study Units

- Differential equations revisited
 A review of essential mathematics
- 2. Transport phenomena strikes again
 Conservation principles and control system terminology
- The LDEVCC meets its Waterloo at the hands of Laplace
 More mathematical methods
- 4. Everything you want to know about first-order systems
 Simple open loop system behavior
- 5. Ditto for higher order systems

 Nore complex open loop system behavior
- 6. Closing the loop again

 Describing closed loop systems
- 7. A little about valves and more about controllers

8 Control system resonance -- hask to mathematica at last

Closed loop system behavior
