#### SUMMARY REPORT

# TEACHING OF UNDERGRADUATE FLUID FLOW AND HEAT TRANSFER

A Paper Presented at the Annual Meeting

American Institute of Chemical Engineers

Miami Beach, Florida

November 6, 1986

Dr. Edwin O. Eisen, Chairman

McNeese State University

Lake Charles, Louisiana

#### INTRODUCTION

The 1986 survey examines the teaching of undergraduate Fluid Flow and Heat Transfer. A questionnaire was sent in April, 1986 to the chairmen of 172 chemical engineering departments in the

. .

that appropriate faculty members complete and return the questionnaire. A follow-up letter was sent in late August to those departments which had not responded.

Replies were received from 110 departments. This compares with 110 replies to last year's survey on Process Dynamics and Control and 92 replies to the 1977 survey on Fluid Flow and Heat Transfer.

The questionnaire consisted of three sheets. The first two

fluid flow. The third requested an estimate of time allotments to subject areas for heat transfer and for fluid flow. The replies to the questionnaires are analyzed in this report and are compared, when appropriate, to replies to the 1977 survey.

#### COURSE LEVEL

Table 1 lists the number of courses of each classification taught in each semester and quarter of the sophomore, junior an senior years. The fluid flow course is usually taught before theat transfer course. 85% of the fluid flow courses are taught in the second semester or third quarter of the sophomore year of the first quarter or first semester of the junior year. Heat transfer follows in the semester or quarter after fluid flow. 90% of the heat transfer courses are given in the two junior ye semesters or the first or second quarters of the junior year.

Senior, Qtr 1

Table 2 compares the course placements of 1977 and 1986. It appears that the fluid flow course has been shifted to an earlier semester. The percent of courses in the senior year has decreased by 15 percentage points while the percent of courses in the sophomore year has increased by 14 percentage points. The predominent position for fluid flow remains in the first semester of the junior year.

The heat transfer course has been shifted slightly in both directions. Compared with 1977, there are fewer courses in the first semester of both the junior and the senior year and more courses in the second semester of the junior year. Courses in the first semester has decreased 14 percentage points while the second semester junior year has increased by 17 percentage points.

TABLE 2

#### COURSE LEVELS

|          | Semester Basis     | Fluid Flow | <u> Heat Transfer</u> | Combined |
|----------|--------------------|------------|-----------------------|----------|
|          | Sophomore Year     | 32% (18%)  | 0% (3%)               | 21%      |
|          | Junior, Semester 1 | 58% (56%)  | 43% (53%)             | 46%      |
|          | Junior, Semester 2 | 8% (15%)   | 49% (32%)             | 21%      |
|          | Senior Year        | 2% (11%)   | 8% (12%)              | 12%      |
| <u> </u> | Quarter Basis      | Fluid Flow | Heat Transfe          | er       |
|          | Sophomre Year      | 29% (7%)   | 0% (0%)               |          |
|          | _Innior: Ouarter 1 | 46% (46%)  | 31% (33%)             |          |
|          |                    |            |                       |          |
|          | Junior, Quarter 2  | 13% (12%)  | 50% (39%)             |          |
|          |                    | Y (        | 400 (440)             |          |
| <u></u>  |                    |            |                       |          |

It appears that SI usage is greater in heat transfer than in fluid flow. Just over half the computational effort is carried out in SI dimensions.

#### TEXTBOOK SELECTION

A total of 28 textbooks were mentioned 186 times in the questionnaires. The five texts listed below account for 67% of all the citations. Of the remaining 23 texts, 9 were cited once, 5 were cited twice and 4 were cited thrice.

| Authors                  | <u>Citations</u> | Percentage |
|--------------------------|------------------|------------|
| McCabe, Smith, Harriott  | 39               | 21%        |
| Bird, Stewart, Lightfoot | <b>30</b>        | <b>16%</b> |

| Geankoplis           | 16 | 9%  |
|----------------------|----|-----|
| Welty, Wicks, Wilson | 15 | 8%  |
| Others               | 63 | 34% |

The textbook usage was also analyzed for class approach and course subject matter. The distibution for the Unit Operations approach is shown below:

| McCabe<br>Bird | 17 | 10 | 9 |
|----------------|----|----|---|
| Bennett        | 1  | T  | 2 |
| Geankoplis     | 3  | 4  | 2 |
| Welty .        |    |    |   |
| Holman         |    | 4  |   |
| Others         | 5  | 7  |   |

For courses using the transport approach, the following distribution was found:

|         | TF | <u>TH</u> | TC |
|---------|----|-----------|----|
| McCabe  |    |           | 1  |
| Bird    | 10 | 8         | 8  |
| Rennett | 5  | 1         | 2  |

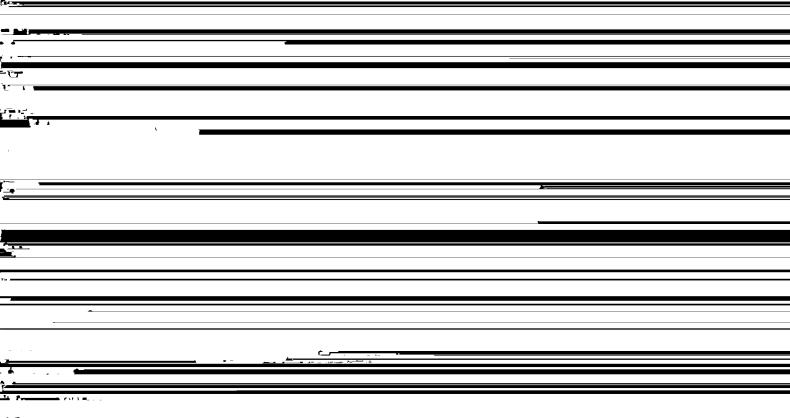

In courses using both approaches, the distribution is:

|  | DF                    | DH     | DC     |
|--|-----------------------|--------|--------|
| McCabe<br>Bird<br>Bennett<br>Geankoplis<br>Welty | 2<br>2<br>5<br>2<br>1 | 1<br>4 | 3<br>4 |
| Holman<br>Others                                 | 5                     | 4<br>3 | 2      |

#### COURSE STRUCTURE

Approximately two dozen topics were selected from textbooks frequently used in heat transfer and fluid flow courses. Instructors were asked to show the number of class sessions spent on the respective topics and to other topics. The results were added and normalized to a 40-session course plan. This is equivalent to a 15-week course meeting three times a week, with 5 sessions for quizzes. Replies to this section of the questionnaire were received on 94% of the heat transfer responses and 94% of the fluid flow responses. The Topic Time Allocations are given on the following pages.

Comparison of the 1986 and 1987 time allocations shows few

FLUID FLOW

- !. Weeks per quarter/semester
- 7. Do you use any films, videotapes or demonstrations in the classroom? If so, please elaborate.

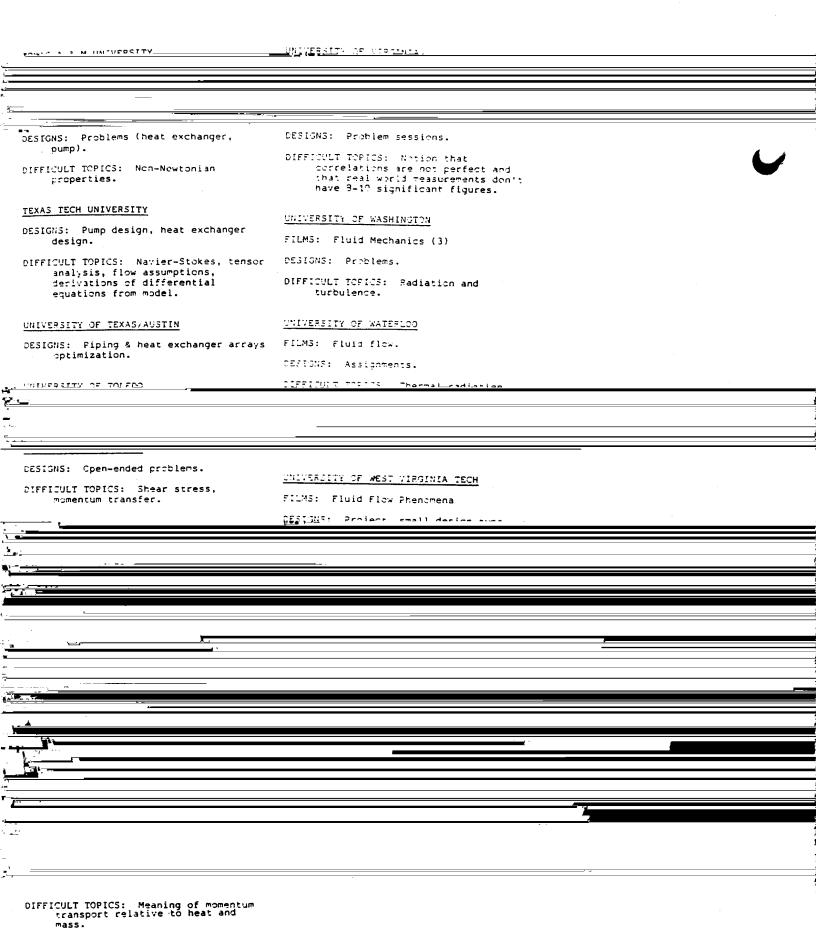

3. How do you incorporate design into these courses?

The following pages summarize replies to three questions on the questionnaire.

- 1. What films or other visual aides are used in the classroom? (FILMS)
- 2. How do you incorporate design within the curriculum? (DESIGN)
- 3. What topics do students seem to have particular difficulty with? (DIFFICULT TOPICS)
